Fire Extinguisher Service

We look forward to the opportunity to work with you on Fire Extinguisher maintenance. We maintain a computerized database with your account details, and we will call ahead each year to set up an appointment for service at a time that is convenient to you. Below is a brief description of the level of service we provide.

Fire extinguishers are an important part of your facility safety. When servicing your fire extinguishers, our certified and experienced service technician will walk through the entire premises during which the following is done:

- Assess for hazards and for proper placement, type and size of fire extinguishers based on the New York State Fire Code and applicable NFPA Standards.
- Record exact location of every fire extinguisher, size, brand and new date to create a complete equipment list for your location, which we can provide to you. *This will allow you to do monthly checks on the fire extinguishers in between our annual service. The list will also allow us to complete service more efficiently in years to come as well as to predict how many units will need required periodic maintenance.*
- Service and tag each fire extinguisher currently at this location and pull it out for periodic maintenance if needed and/or relocate the extinguisher for proper placement. *Annual service includes checking the cylinder itself for damage, checking the hose, gauge, bracket, handle, and pin for proper function and installing a new tamper seal. Every six years fire extinguishers will be brought to the shop to have a more complete maintenance done as required in the Codes. These services ensure that the extinguisher will function when needed.*
- Install new fire extinguishers, if needed, to meet standards for life safety protection.
- Install or relocate existing Fire Extinguisher signs. *Fire extinguishers can only be used if they can be located. This is now an OSHA (1910.157 (e) (2)) requirement.*
- 2-3 day turn-around on shop work

Other Services:

- Service and install Kitchen Fire Suppression Systems.
- OSHA Fire Extinguisher Compliance Education, including Bullex Digital trainer.
